

WASHINGTON D.C

November 1st, 2013

DAY 1

The vision that our founding fathers designed in which "all citizens live in a stable and secure society" is gradually falling apart because of all the weapons.

The regulation of guns is not being developed properly. Nowadays we see how more accidents and mishaps occur because of these and the fact is that the people who use them are not necessarily trained

for this action, causing an atmosphere of insecurity in the whole nation.

The Democratic Party states that all citizens are entitled to use weapons not only to defend themselves but also their loved ones and family, establishing that a better system could be developed to ensure national security without eradicating the use of arms. One of these measures and the most discussed was that all those who wish to own guns must pass a test to establish if they are able to keep them and use them. Today this test is not being performed optimally, so we observe the increase of accidents and wounded people as well as the number of deaths. Our authorities should take into account not only the physical condition of the person interested in buying a gun, but also the psychological part and if they know how to use them properly.

The Republican Party is against weapons because they believe that a person can protect themselves without the need of them. Citizens have the right to live without worrying about bringing a gun home and having an environment free of them. A point discussed was the creation of a militia, using the example of Switzerland, we see how all of those people who want access to weapons are part of the National Militia of their respective countries, where they are thought about their use and effect, and this way they not only contribute to establishing a more secure nation but own its very development, always keeping in mind that it was their own choice.

"Guns do not kill people, people kill people."
